

Jenkins

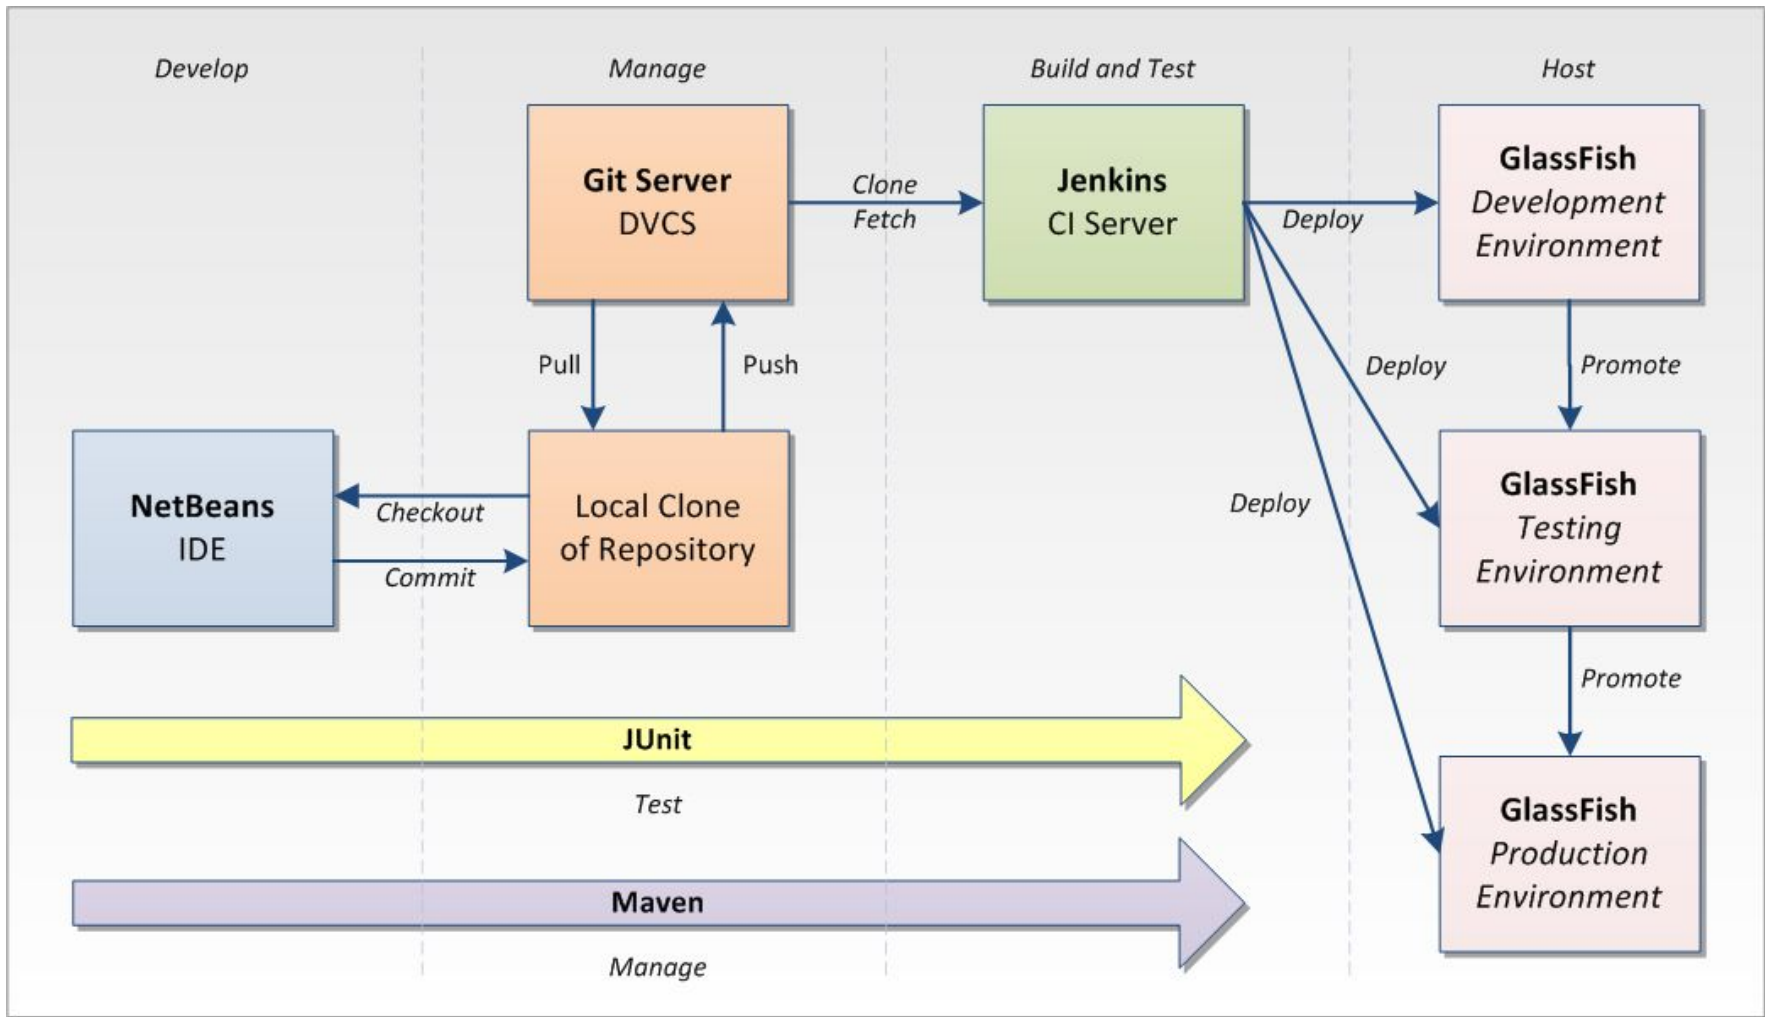

**Continuous Integration and Continuous Delivery
(CICD)**

Introduction

Jenkins is an open source automation tool written in Java with plugins built for Continuous Integration purpose. Jenkins is used to build and test your software projects continuously making it easier for developers to integrate changes to the project, and making it easier for users to obtain a fresh build. It also allows you to continuously deliver your software by integrating with a large number of testing and deployment technologies.

With Jenkins, organizations can accelerate the software development process through automation. Jenkins integrates development life-cycle processes of all kinds, including build, document, test, package, stage, deploy, static analysis and much more.

Jenkins achieves Continuous Integration with the help of plugins. Plugins allows the integration of Various DevOps stages. If you want to integrate a particular tool, you need to install the plugins for that tool. For example: Git, Maven 2 project, Amazon EC2, HTML publisher etc.

TOPICS

1. Installing and Configuring Jenkins
2. How to Find Home Directory
3. How to create Users, Manage Users, Roles
4. Getting Started with JOBS
5. Running Job remotely
6. Scheduling Build Jobs
7. Jenkins Integrations with GIT
8. CICD using GIT, Maven and Tomcat server
9. Sending Email Notification using Jenkins

1. Installing and Configuring Jenkins

Step 1:

Download JDK, Tomcat & Jenkins.war

Login into instance ---> change to root user ---> update your instance --->

change to OPT dir ---> download JDK, Tomcat7 & Jenkins.war

```
$sudo su root
```

```
#cd /
```

```
#apt-get update
```

```
#cd /opt/
```

```
#wget https://jdk1.8.....tar.gz
```

```
#wget https://apache-tomcat.....tar.gz
```

Open your firefox browser → <https://jenkins.io/download/>

Download Jenkins 2.150.2 for:

Version of Jenkins

Docker

FreeBSD

Gentoo

Mac OS X

OpenBSD

openSUSE

Red Hat/Fedora/CentOS

Ubuntu/Debian

Windows

Generic Java package (.war)

Docker

FreeBSD

Gentoo

Mac OS X

OpenBSD

openSUSE

Red Hat/Fedora/CentOS

Ubuntu/Debian

OpenIndiana Hipster

Windows

Generic Java package (.war)

Click on this to download

Once a Jenkins package has been downloaded, proceed to the [Installing Jenkins](#) section of the User Handbook.

#wget <http://ftp-chi.osuosl.org/pub/jenkins/war-stable/2.150.2/jenkins.war>

Step 2: Setting paths for Java / JDK and tomcat

Unzip JDK and apache-tomcat

#tar -xzf jdk1.8.....tar.gz -----> for unzip jdk

#tar -xzf apache-tomcat7.....tar.gz -----> for unzip tomcat

#mv jdk1.8..... jdk1.8 ----> for changing name to jdk1.8

#mv apache-tomcat----- tomcat7 ----> for changing name to tomcat7

#vi ~/.profile

```
export JAVA_HOME="/opt/jdk1.8"
export PATH=$JAVA_HOME/bin:$PATH
export CATALINA_HOME="/opt/tomcat7"
export PATH=$CATALINA_HOME/bin:$PATH
```

source ~/.profile ---> to update environment variables

java -version ----> to check java version, for confirmation of installation

Move jenkins.war file from /opt/ to /opt/tomcat7/webapp/

#mv jenkins.war tomcat7/webapps/

#startup.sh -----> to start tomcat server

```
root@ip-172-31-91-116:/opt/tomcat7/webapps# ls
docs  examples  host-manager  jenkins.war  manager  ROOT
root@ip-172-31-91-116:/opt/tomcat7/webapps# startup.sh
Using CATALINA_BASE:   /opt/tomcat7
Using CATALINA_HOME:   /opt/tomcat7
Using CATALINA_TMPDIR: /opt/tomcat7/temp
Using JRE_HOME:        /opt/jdk1.8
Using CLASSPATH:       /opt/tomcat7/bin/bootstrap.jar:/opt/tomcat7/bin/tomcat-juli.jar
Tomcat started.
root@ip-172-31-91-116:/opt/tomcat7/webapps#
```

Copy instance public ip, open browser

<instance public ip>:8080/jenkins (tomcat runs on 8080 port default)

Getting Started

Unlock Jenkins

To ensure Jenkins is securely set up by the administrator, a password has been written to the log ([not sure where to find it?](#)) and this file on the server:

`/root/.jenkins/secrets/initialAdminPassword`

This is home directory of Jenkins where it is installed. if you want, you can change. get password from home directory

Please copy the password from either location and paste it below.

Administrator password

come to root dir
#cd /
#cat cd /root/.jenkins/secrets/initialAdminPassword

you that password for Administrator password

Continue

Getting Started

Customize Jenkins

Plugins extend Jenkins with additional features to support many different needs.

Install suggested plugins

Install plugins the Jenkins community finds most useful.

Jenkins will install all required plugins

Select plugins to install

Select and install plugins most suitable for your needs.

by using above option, you can install particular plugins

All None Suggested

Selected (20/57)

Note that the full list of plugins is not shown here. Additional plugins can be installed in the **Plugin Manager** once the initial setup is complete. [See the Wiki for more information.](#)

Organization and Administration (2/3)

☐ Dashboard View ↗

10

Customizable dashboard that can present various views of job information.

☒ Folders ↗

This plugin allows users to create "folders" to organize jobs. Users can define custom taxonomies (like by project type, organization type etc). Folders are nestable and you can define views within folders. Maintained by CloudBees, Inc.

☒ OWASP Markup Formatter ↗

9

Uses the [OWASP Java HTML Sanitizer](#) to allow safe-seeming HTML markup to be entered in project descriptions and the like.

Build Features (4/10)

☐ build-name-setter ↗

11

This plug-in sets the display name of a build to something other than #1, #2, #3, ...

☒ Build Timeout ↗

7

This plugin allows builds to be automatically terminated after the specified amount of time has elapsed.

Getting Started

Process of plugins installations

⚙ PAM Authentication	⚙ LDAP	⚙ Email Extension	⚙ Mailer	

Getting Started

Create First Admin User

Username:

Password:

Confirm password:

Full name:

E-mail address:

this is creation of First Admin User, but there is a Jenkins Admin user to login.

Getting Started

Instance Configuration

Jenkins URL:

`http://3.83.106.28:8080/jenkins/`

The Jenkins URL is used to provide the root URL for absolute links to various Jenkins resources. That means this value is required for proper operation of many Jenkins features including email notifications, PR status updates, and the `BUILD_URL` environment variable provided to build steps.

The proposed default value shown is **not saved yet** and is generated from the current request, if possible. The best practice is to set this value to the URL that users are expected to use. This will avoid confusion when sharing or viewing links.

Getting Started

Jenkins is ready!

You have skipped the **setup of an admin user**.

To log in, use the username: "admin" and the administrator password you used to access the setup wizard.

Your Jenkins setup is complete.

Start using Jenkins

- New Item
- People
- Build History
- Manage Jenkins
- My Views
- Credentials
- Lockable Resources
- New View

Welcome to Jenkins!

Please **create new jobs** to get started.

This is Jenkins Admin Login page

Build Queue

No builds in the queue.

Build Executor Status

- 1 Idle
- 2 Idle

id builds are in pipeline -- will show at here

2. How to Find Home Directory of Jenkins

1. By Default, while Jenkins installation, a dir will be created in login user home dir
2. This jenkins home dir contains -- All Configurations, Plugins, logs, jobs & etc

```
root@ip-172-31-91-116:~/.jenkins# ls
config.xml                               nodeMonitors.xml
hudson.model.UpdateCenter.xml            nodes
hudson.plugins.git.GitTool.xml           plugins
identity.key.enc                         secret.key
jenkins.CLI.xml                          secret.key.not-so-secret
jenkins.install.InstallUtil.lastExecVersion secrets
jenkins.install.UpgradeWizard.state      updates
jenkins.model.JenkinsLocationConfiguration.xml userContent
jenkins.telemetry.Correlator.xml          users
jobs                                       workflow-libs
logs
```

root@ip-172-31-91-116:~/.jenkins#

3. Login to Jenkins ---> Manage Jenkins ---> on top, you can see the home dir
